

Virtual Payment Terminal - Take payments on any device!

A virtual terminal is a web-based payment system for processing over-the-phone transactions. It's basically a "virtual card machine" and you don't even need a company website to get one. Set up is quick and easy and you will be taking payments over the phone on any smartphone, tablet or PC in no time! Perfect for call centres or mail order businesses. No technical integration is needed.

Whether you are have retail store, a digital business or something in between, we can help to get you trading online using our payment gateways. For new business and start-ups a brilliant option is the hosted payment page offering fast and secure transactions. At the point of purchase clients are taken from your website to the secure payment page to complete the transaction. We can also provide a tailored, branded integrated payment page that sits in your website.

- ✓ Simple to Setup
- ✓ Secure & Reliable
- ✓ Multi-User Login
- ✓ Low monthly fee & transaction charges
- ✓ Next day settlement into your bank account
